GARGEE SHARMA

AJMER, RAJASTHAN | Email | LinkedIn

PROFESSIONAL SUMMARY

B.Tech Information Technology student (Expected 2028) with hands-on experience building Deep Learning, MLOps, and Generative AI applications. Experienced in developing production-oriented ML pipelines using Docker, DVC, MLflow, FastAPI, and LangChain.

TECHNICAL SKILLS

- Languages & Data: Python, NumPy, Pandas, Scikit-learn, Matplotlib, SQL.
- Machine Learning: Supervised & Unsupervised Learning, Time Series Analysis.
- Deep Learning & GenAI: Neural Networks (ANN, CNN, RNN), TensorFlow, Keras, LangChain (RAG & Multi-Agent System).
- MLOps & Infrastructure: Git, Docker, DVC (Data Version Control), FastAPI, CI/CD (GitHub Actions).

EDUCATION

Engineering College Ajmer — Ajmer, Rajasthan

Bachelor of Technology (B.Tech) in Information Technology (Expected Graduation: May 2028)

TECHNICAL PROJECTS

Project 1: GARGEEMIND (Multi-Agent AI System) | [GitHub Link]

- Engineered a multi-agent AI system orchestrating 4 specialized LangChain agents (Search, Reader, Writer, Critic) using Mistral AI and Tavily.
- Designed an autonomous research pipeline leveraging BeautifulSoup scraping to generate instantly downloadable, sourced Markdown reports.
- Built a full-stack Streamlit app featuring environment secret management and health-check monitoring, deployed live to Render.
- Implemented advanced agentic design patterns and prompt engineering to produce structured, reproducible research outputs at scale.

Project 2: MLOps Kidney Disease Classifier | [GitHub Link]

- Developed a VGG16 model to classify kidney CT scans into 4 distinct clinical classes (5000+ kidney CT images), achieving 81.8% validation accuracy (loss: 3.858).
- Built a reproducible MLOps pipeline utilizing DVC for dataset versioning and MLflow for real-time training experiment tracking.
- Orchestrated automated CI/CD workflows using GitHub Actions and containerized the system with Docker for local and cloud consistency.
- Deployed a dual-service architecture featuring a low-latency FastAPI backend paired with an interactive Streamlit dashboard.
